Assignment

- Is JSX mandatory for React?
- Is ES6 mandatory for React?
- {TitleComponent} VS {<TitleComponent/>} VS {<TitleComponent></TitleComponent>} in
- How can I write comments in JSX?
- What is <React.Fragment> </React.Fragment> and <> </>> ?
- What is Virtual DOM?
- What is Reconciliation in React?
- What is React Fiber?
- Why we need keys in React? When do we need keys in React?
- Can we use index as keys in React?
- What is props in React? Ways to
- What is a Config Driven UI?

Coding Assignment:

- Build a Food Ordering App
 - o Think of a cool name for your app
 - Build a AppLayout
 - o Build a Header Component with Logo & Nav Items & Cart
 - o Build a Body Component
 - o Build RestaurantList Component
 - o Build RestaurantCard Component
 - Use static data initially
 - Make your card dynamic(pass in props)
 - Props passing arguments to a function Use
 Destructuring & Spread operator
 - o Render your cards with dynamic data of restaurants
 - o Use Array.map to render all the restaurants

PS. Basically do everything that I did in the class, in the same sequence. Don't skip small things.
